Stationary Tables

LINK | Stationary Tables

For Auditoriums and Learning Environments

Turn any space into an auditorium. LINK Stationary Tables feature the same elegant style and functionality as the LINK Flip & Nest counterpart. With three height options and five surface shapes, tables can be arranged in infinite ways to support any classroom or training room learning format while different row heights create an obstruction-free learning environment.

Low profile bell glides boast contemporary design, strength and performance while protecting tables from damage and floors from scratches.

For maximum stability, standard ganging clips are precisely positioned in each corner of the worksurface.

The benefit of mixing table heights and shapes creates additional opportunities for the most efficient use of any learning space.

Heavy-duty continuous beam prevents tops from sagging.

With under 10 minutes assembly time per table, LINK tables will be installed in minimal time.
